JasperReports Basic Tutorial

TUTORIAL GUIDE
TUTORIALS POINT

About the Tutorial

JasperReports is an open source java reporting engine. JasperReports is a Java class library, and it is meant for those Java developers who need to add reporting capabilities to their applications. This simple and user-friendly tutorial covers almost all the basic of JasperReports that a beginner should know.

Audience

This tutorial is designed for Software Professionals as well as for all those beginners who would like to learn the concepts of JasperReports.

Prerequisites

Before proceeding with this tutorial, it is expected that you have a basic understanding of Java programming language. A basic understanding of Java and other associated programming will be an additional advantage to understand the topic.

1. JasperReports - Getting Started

JasperReports is an open-source reporting tool for Java that is used for reporting of applications.

This reporting tool helps in writing rich content onto the screen, to the printer, or into a variety of files like HTML, PDF, XLS, RTF, CSV, XML, ODT and TXT.

JasperReports can also be used for Java-enabled applications like Java EE or web applications to generate dynamic content.

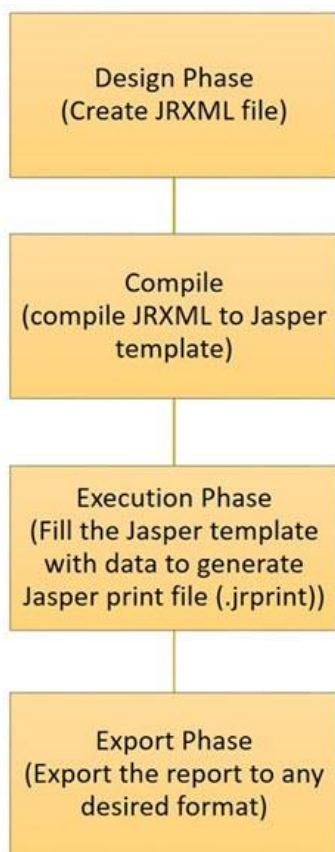

Features of JasperReports

- Offers flexible report layout.
- Developers can supply data in multiple ways.
- It allows you to accept data from multiple data sources.
- Watermarks can also be applied.
- Multiple data sources can be used to transfer data.
- You can generate subreports
- It can generate subreports.
- It helps you to export reports in a variety of formats like PDF, HTML, RTF, Microsoft Excel files.
- The engine allows report definitions to include charts.

Tools to generate JasperReports

- Eclipse plugin for Jaspersoft studio
- iReport
- Jaspersoft Studio

Lifecycle of JasperReports

Designing the report:

This will be the first step where we create the JRXML file. It is the file is a simple XML document which defines the report layout. You can develop this file using any text editor, or report designer.

Compiling the report:

In this phase, the JRXML file created in the first phase is compiled, and a binary object with .jasper extension is generated. Jasper files are shipped along with the application to run the reports.

Executing the report:

In this step, data from the application is sent to the compiled report. A class called `net.sf.jasperreports.engine.JasperFillManager` offers the necessary functions to fill the data in the reports. Then a jasper print file is created, which can be used to print or export the report.

Exporting the report to the desired format:

It is the last phase of JasperReport lifecycle in which we need to export the Jasper print file using the class `JasperExportManager`.

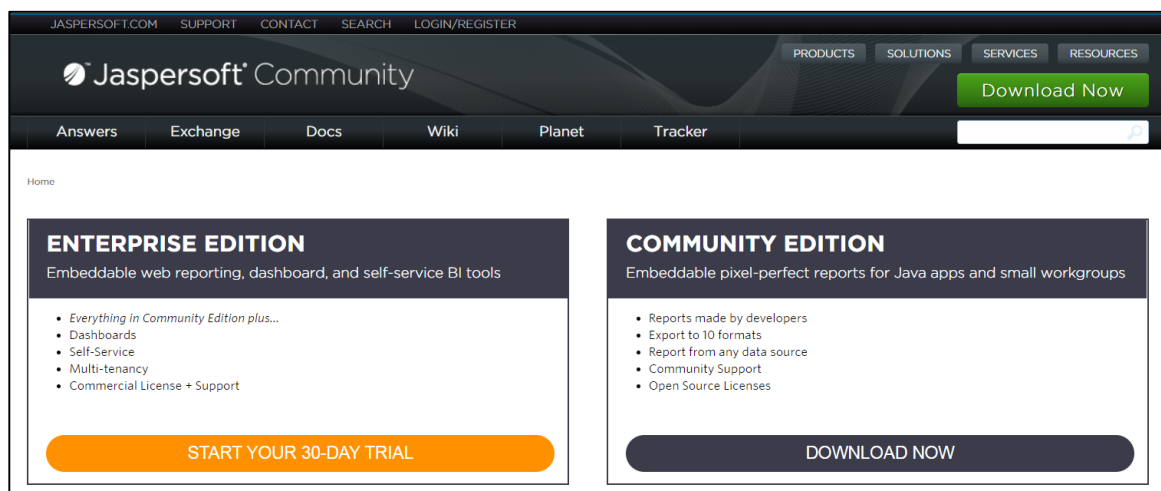

2. JasperReports - Environment Setup

JasperReports is a pure Java library and not a standalone application.

It cannot run on its own, hence it needs to be embedded into another client or server-side Java application. As it is Java based, it can be run on any platform that supports Java (JDK 1.3 and above).

JasperReports Installation Steps

1. Go to download link : <https://community.jaspersoft.com/download>
2. Click **Login/Register** to download
3. Add the required fields to register account.
4. Go to your gmail to verify account and click the link in your gmail.
5. Login with your email and password.
6. Choose **Community Edition** to download:

7. Choose **Jaspersoft Studio** to download :

Community Editions

	JasperReports® Server CE	v7.8.0 11 Aug 2020	Download
	JasperReports® Library CE	v6.16.0 18 Nov 2020	Download
	Jaspersoft® Studio CE	v6.16.0 16 Nov 2020	Download
	iReport Designer CE	v5.6.0 28 May 2014	Download
	Jaspersoft® ETL CE	v5.6.2 14 Jun 2015	Download

8. Choose the file to download based on the OS :

▼ Jaspersoft Studio 6.16.0 (v6.16.0)

Published: 2020-Nov-16

The new Jaspersoft Studio release includes the following:

- Full support for JasperReports Library 6.16.0
- PostgreSQL driver updated from version 42.2.5 to 42.2.16
- Minor and major bug fixes

Download

-  README.txt
-  TIB_js-studiocomm_6.16.0_windows_x86_64.zip
-  TIB_js-studiocomm_6.16.0_windows_x86_64.exe
-  TIB_js-studiocomm_6.16.0_macosx_x86_64.dmg
-  TIB_js-studiocomm_6.16.0_linux_amd64.deb
-  TIB_js-studiocomm_6.16.0_linux_x86_64.tgz

9. Install Jaspersoft studio.

3. JasperReports – Report Structure

What is Report?

A report is a meaningful, well-defined, and summarized presentation of information.

Usually, the routine activities are automated and data summarized into a decision-supporting "Reports".

Reports represent usual messy data into charts, graphs, and other forms of graphical representations.

Report Template

Generally, the following layout is adopted to generate reports by most of the commercial report generating tools.

- Title
- Page header
- Column header
- Detail
- Column footer
- Page footer
- Summary

Title	<ul style="list-style-type: none"> • Title contains the 'Title' of the report. • It appears only once at the very beginning of the report, • for example, "Tutorials Point Report."
Page Header	<ul style="list-style-type: none"> • Page Header may contain date and time information and/or organization name. • This appears at the top of each page.
Column Header	<ul style="list-style-type: none"> • Column Header lists the names of those specific fields, which you want to display in the report, • for example, "StudentName", "Age", "Total Student", etc.
Detail	<ul style="list-style-type: none"> • Detail is the part where entries of the specific fields
Column Footer	<ul style="list-style-type: none"> • Column Footer may display summary of any of the field, • for example, "Total Student" : "100."
Page Footer	<ul style="list-style-type: none"> • Page Footer may contain page count information. • It appears at the bottom of each page, • for example, "1/23."
Summary	<ul style="list-style-type: none"> • Summary contains information inferred from "detail" part.

4. JasperReports – Report with MySQL Database

How to create a Report Template

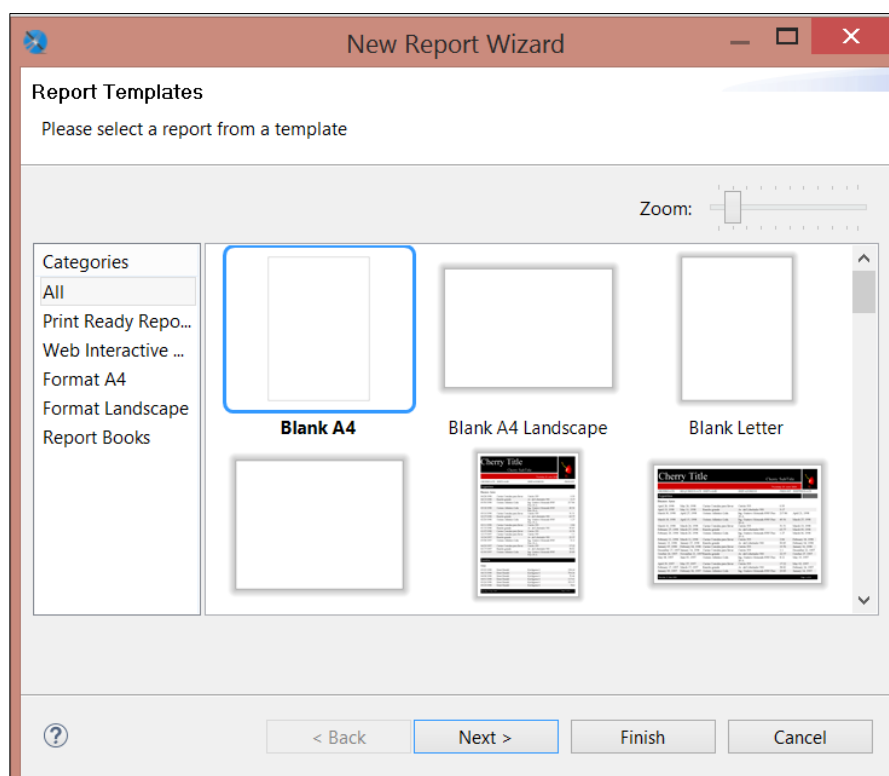

A report is designed and created using the below-mentioned steps –

Step 1. Create JRXML file in Jaspersoft studio

- Click on the file option
- Then, select New in the dropdown menu
- Click on JasperReport option

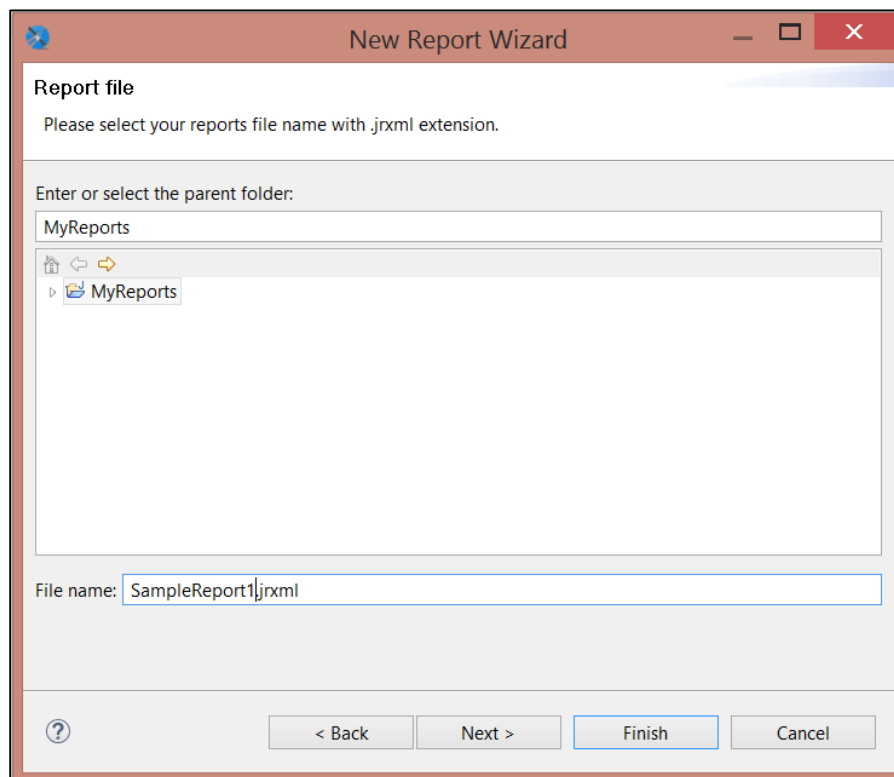

Step 2. Selecting the desired template.

- Select a template – **Blank A4**.
- Click on the "Next" button.

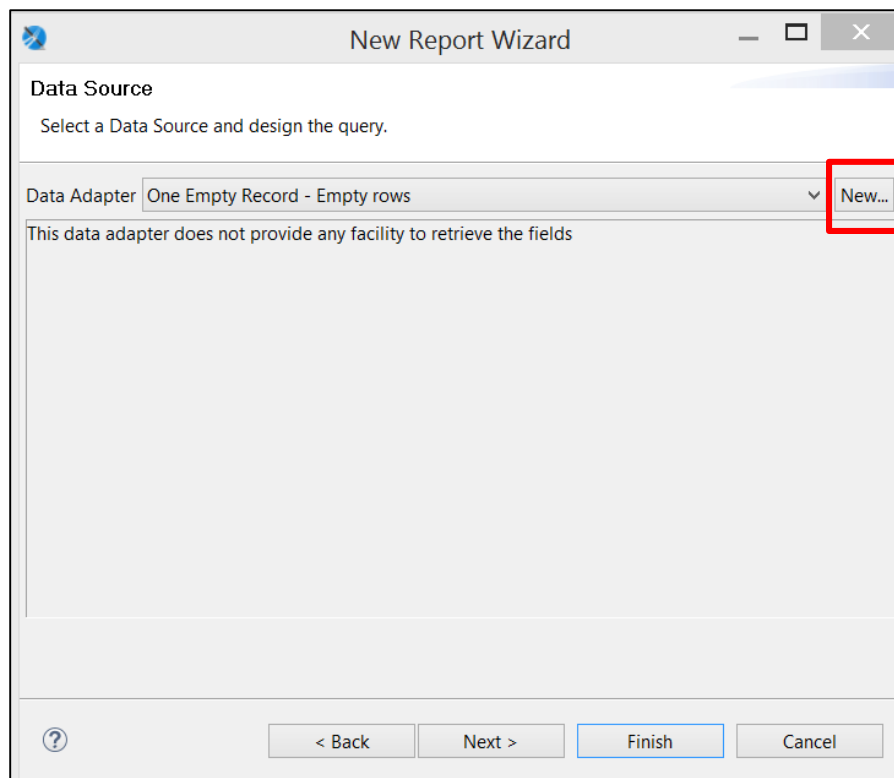

Step 3. Selecting a parent folder.

- Go to MyReports folder.
- Enter the file name.
- Click on the "Next" button.

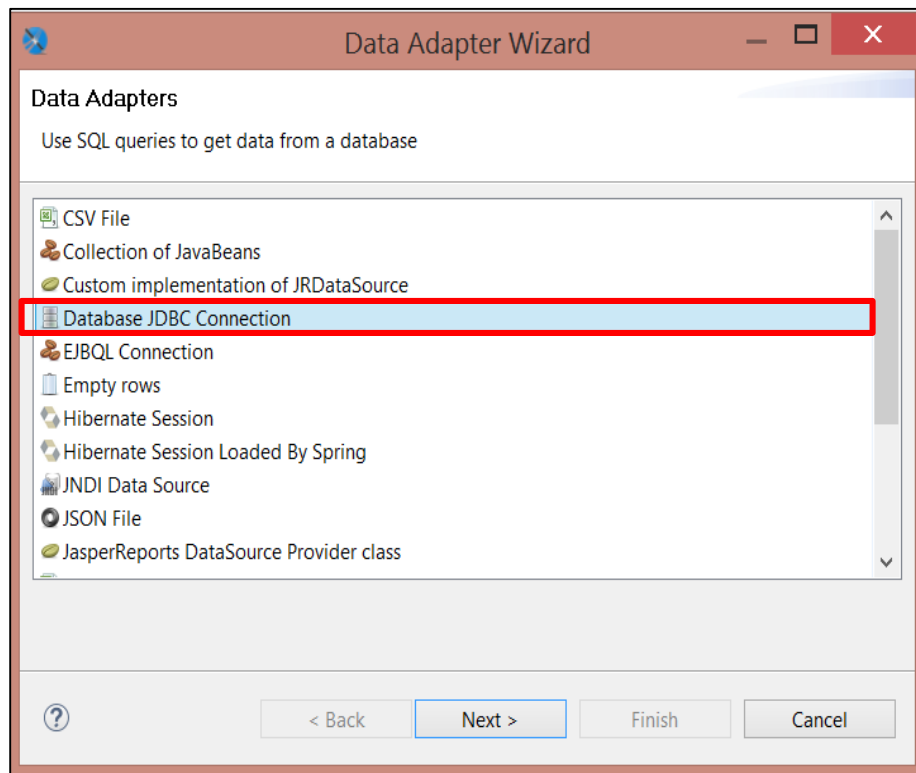

Step 4. In the Data Source window, tap on "New" button and create a new data adapter.

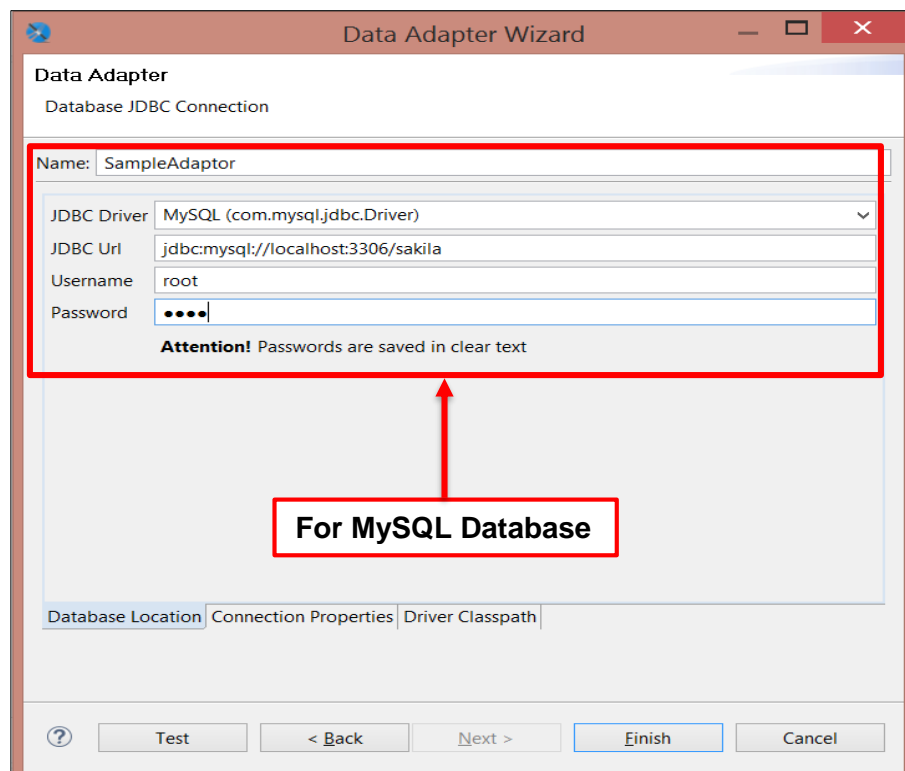

Step 5. Select a Data Adapter.

- Select the data adapter from the list box – **Database JDBC Connection**
- Click on the "Next" button.

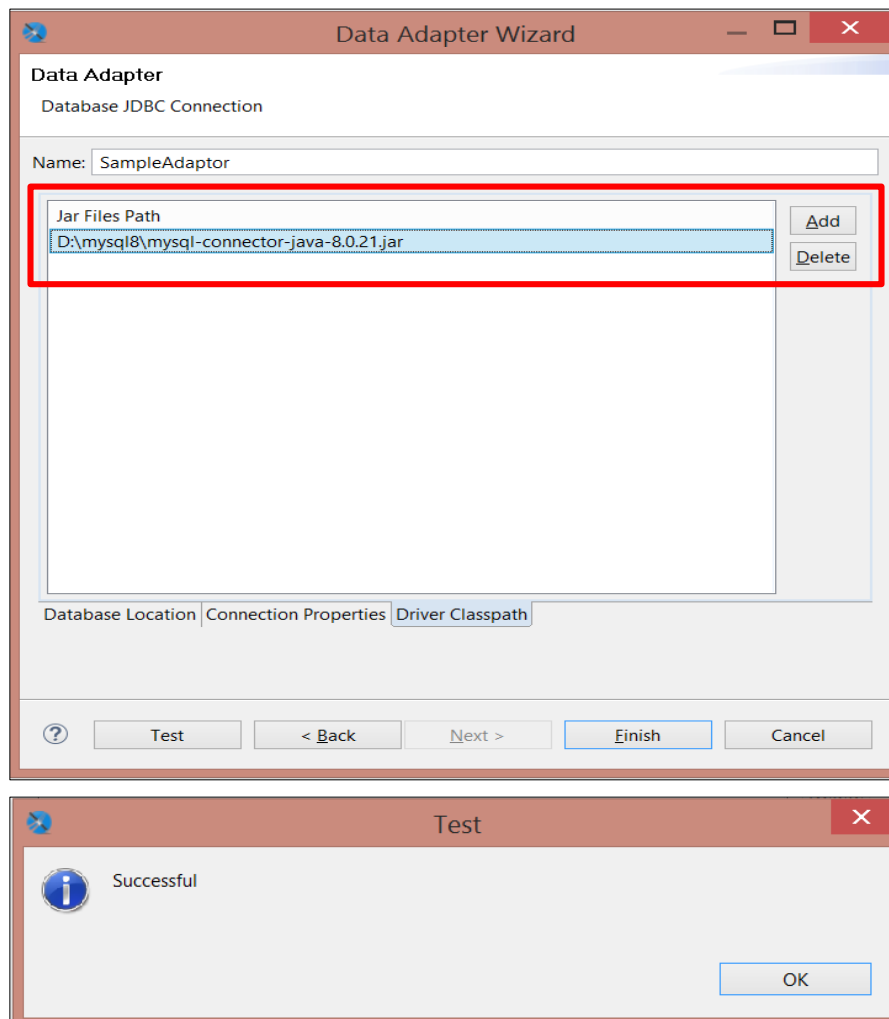

Step 6. Fill up data adapter details.

- Enter a name for your adapter.
- Fill up database properties.

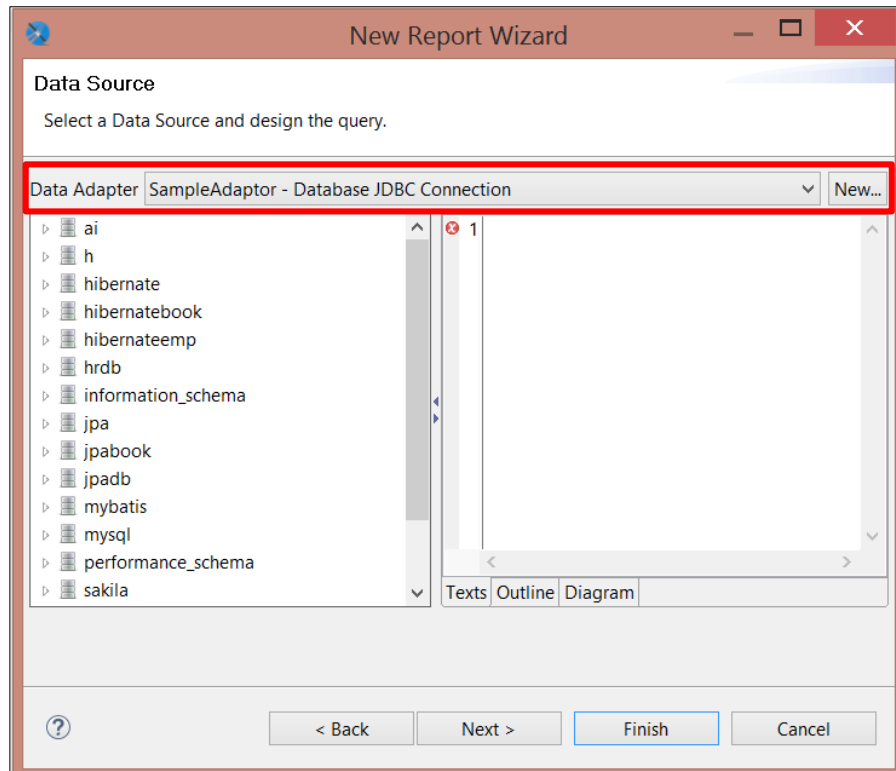

Step 7. Select jar file in the Driver Classpath.

- Click Add button.
- Choose database jar file.
- Click Test button.

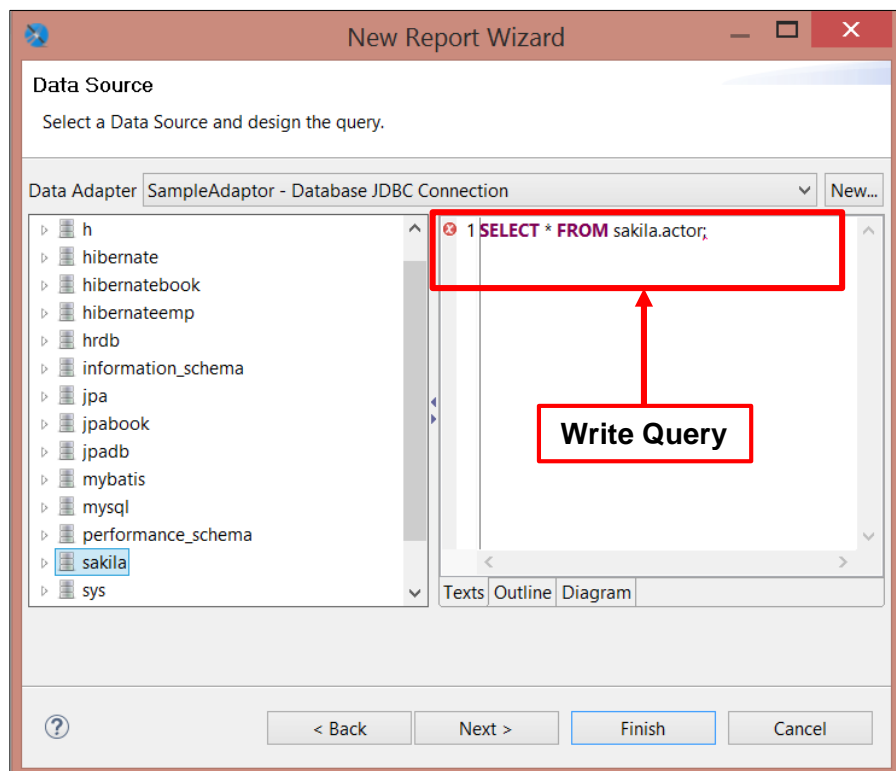

Step 8. Congratulations! You are done with adding all important report creation information successfully. Now, click on the "Finish" button.

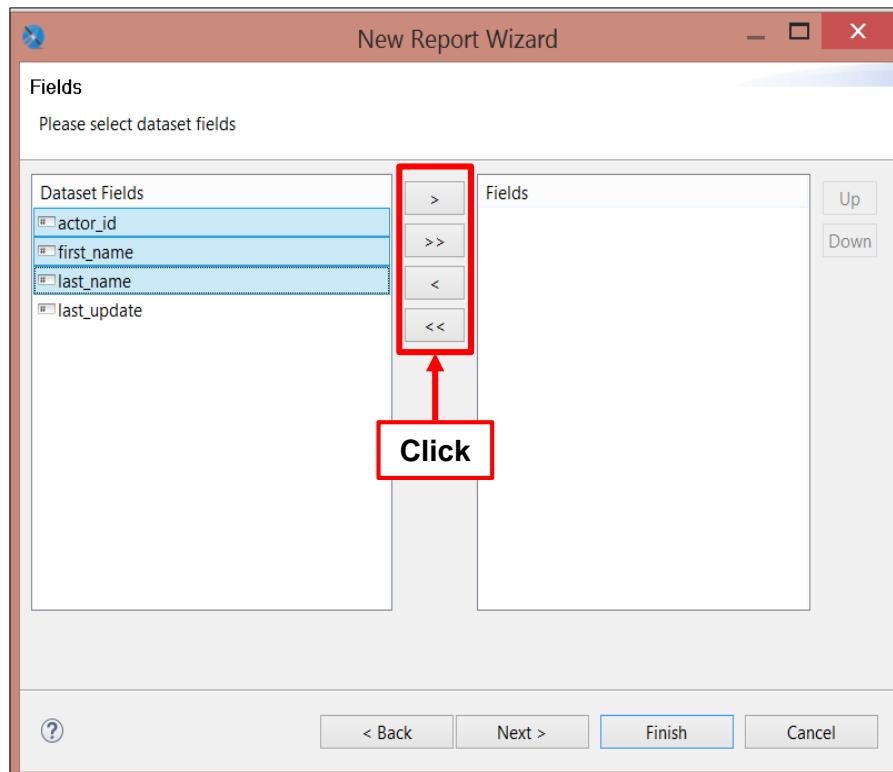

Step 9.

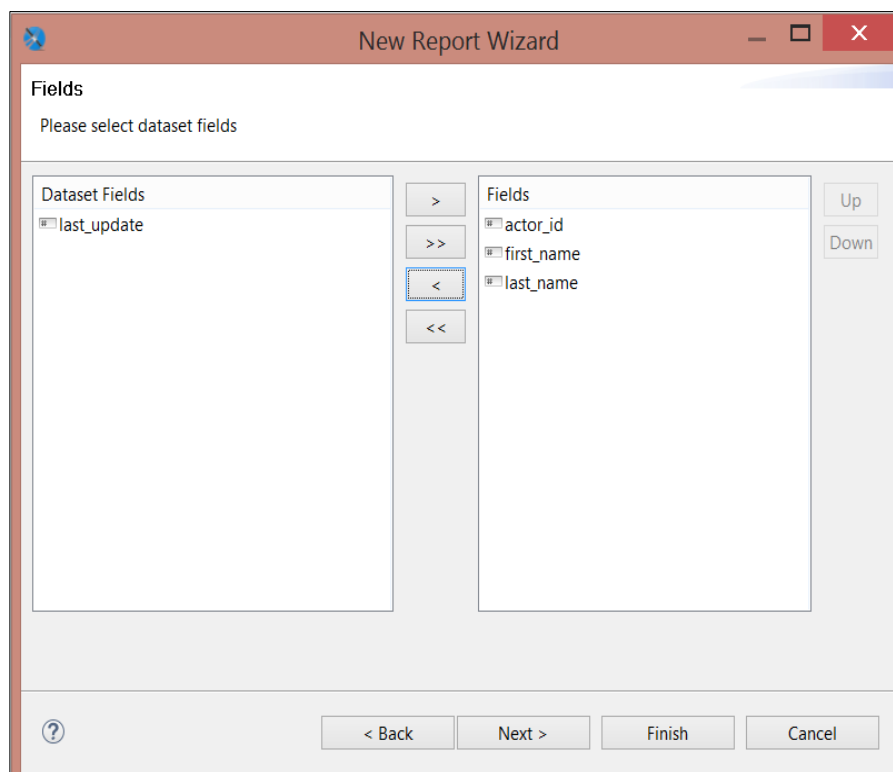

Step 10. Write Query for the report, then click “Next” button.

Step 11. Select Dataset fields to show in the report, then click “Next” button.

Step 12. Click “Next” button.

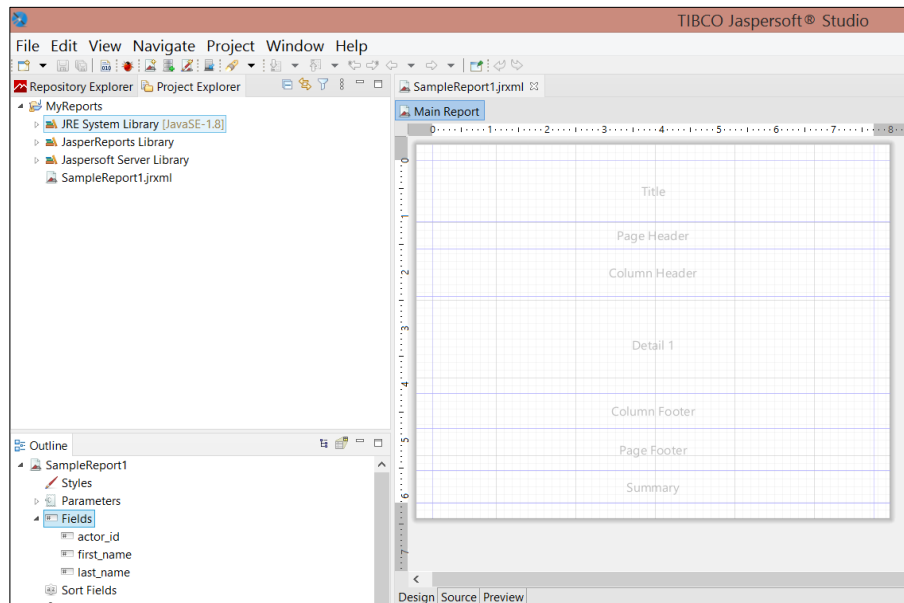

Step 13. Select field to group by clause, then click “Next” button.

The screenshot shows the 'New Report Wizard' window at the 'Group By' step. The title bar reads 'New Report Wizard'. Below the title bar, the text 'Group By' is displayed, followed by the instruction 'Please select fields to Group By'. The main area contains two list boxes: 'Dataset Fields' on the left and 'Fields' on the right. The 'Dataset Fields' list contains three items: 'actor_id', 'first_name', and 'last_name'. Between the list boxes are four arrow buttons: '>', '>>', '<', and '<<'. To the right of the 'Fields' list box are two buttons: 'Up' and 'Down'. Below the list boxes, there is a checkbox with the text 'Use the group fields as sort fields. Select this option if you want to aggregate all the group fields with the same value and not only the consecutive ones'. At the bottom of the window, there is a row of four buttons: '< Back', 'Next >', 'Finish', and 'Cancel'. The 'Next >' button is highlighted with a blue border.

Step 14. Click “Finish” button.

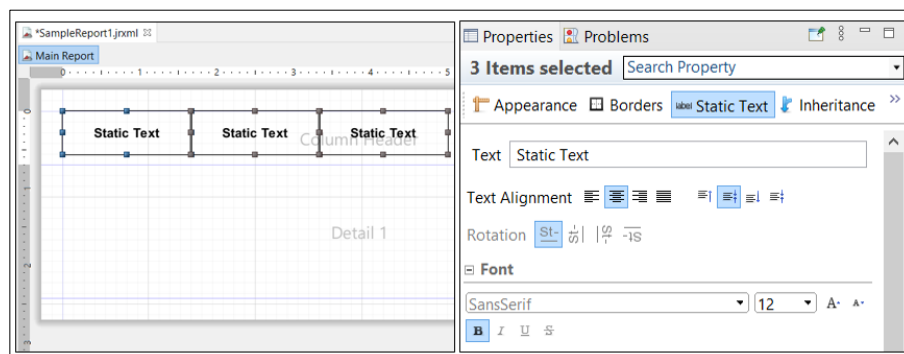

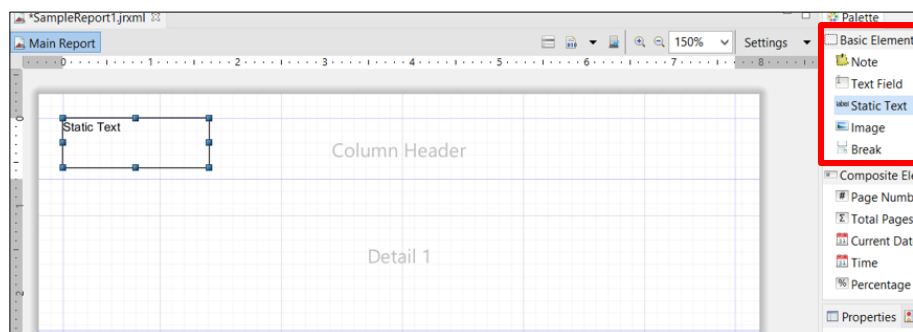

The screenshot shows the 'New Report Wizard' window at the 'Finish' step. The title bar reads 'New Report Wizard'. Below the title bar, the text 'Finish' is displayed, followed by the message 'We are ready to create your report'. The main area contains the text 'Congratulations!' in a large font, followed by the message 'All the information to create your new report have been successfully acquired. Press Finish to generate the report.' At the bottom of the window, there is a row of four buttons: '< Back', 'Next >', 'Finish', and 'Cancel'. The '< Back' button is highlighted with a blue border.

Step 15. The following is the generated report with Database query.

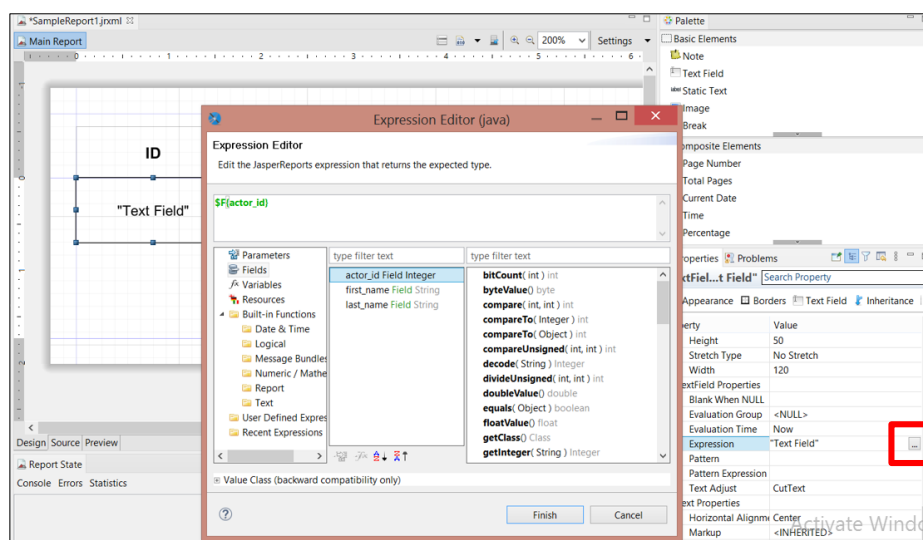

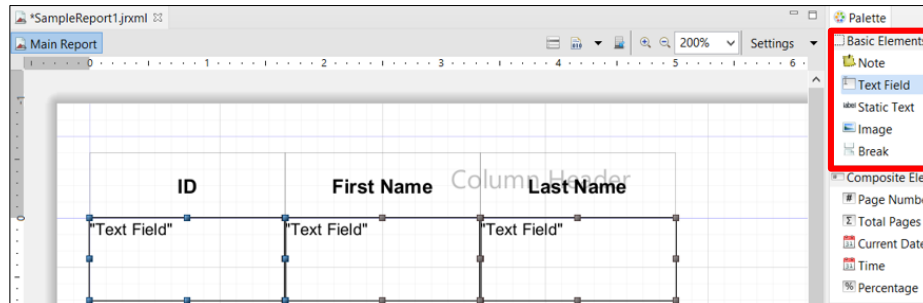

Step 16.

- Drag **“Static Text”** in the Basic Elements to show in the Column Header.
- Change style in the **Properties** window.

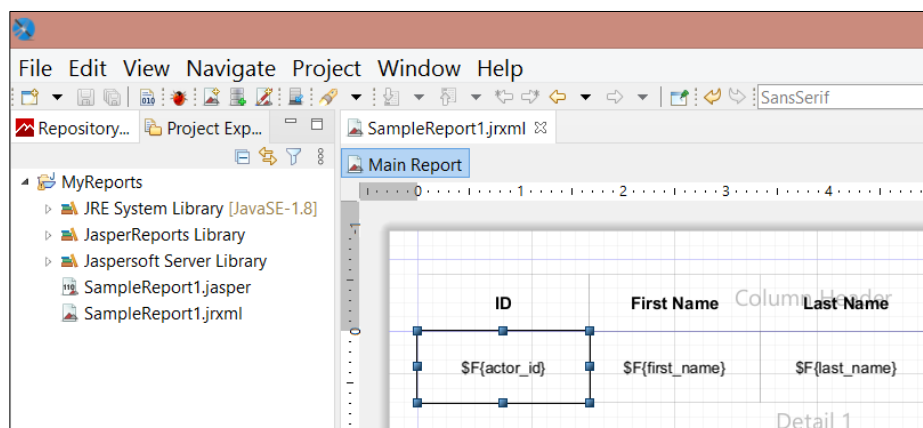

Step 17.

- Drag **"Text Field"** in the Basic Elements to show in the Detail.
- Change style in the **Properties** window.
- Click **browse button** in the **Expression** of Text Field to show dataset fields in the related Text Field.

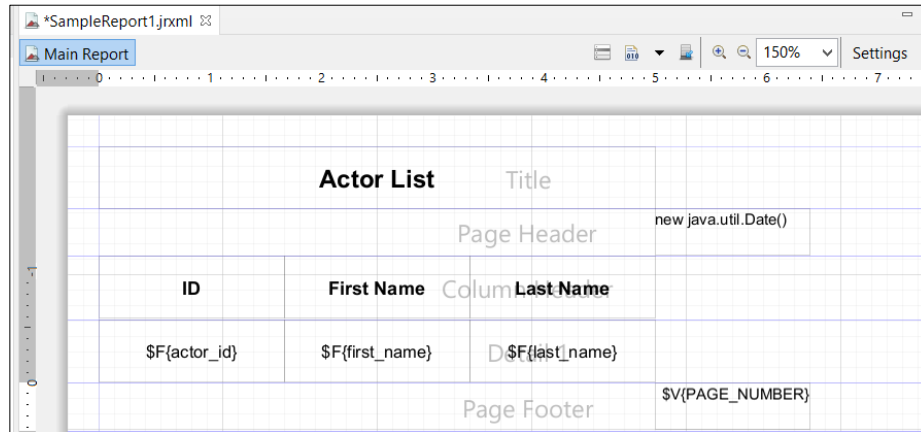

Step 18. SampleReport1.jasper is generated when jrxml is compiled.

Step 19.

- Add “Actor List” in the Static Text for Title.
- Add Date in the Page Header.
- Add Static Text for Column Header.
- Add Text Field for Detail.
- Add Page number for Page Footer.

Step 20. Final Report is generated with the database query.

Actor List		
March 10, 2021		
ID	First Name	Last Name
1	PENELOPE	GUINNESS
2	NICK	WAHLBERG
3	ED	CHASE
4	JENNIFER	DAVIS
5	JOHNNY	LOLLOBRIGIDA
6	BETTE	NICHOLSON
7	GRACE	MOSTEL
8	MATTHEW	JOHANSSON
9	JOE	SWANK
10	CHRISTIAN	GABLE
11	ZERO	CAGE
12	KARL	BERRY
13	UMA	WOOD
14	VIVIEN	BERGEN
15	CUBA	OLIVIER
16	FRED	COSTNER

5. JasperReports – Report with Java

To use JasperReports with Java, there are some steps:

Step 1: Download JasperReports Library

Step 2: Download MySQL jar

Step 3: Create Java Web Project

Step 4: Prepare Report

Step 1: Download JasperReports Library

 bcprov-jdk15on-1.64.jar	3/13/2021 9:58 PM	Executable Jar File	4,660 KB

Step 2: Download MySQL jar

 mysql-connector-java-8.0.21.jar	6/16/2020 5:17 PM	Executable Jar File	2,342 KB
---	-------------------	---------------------	----------

Step 3: Create Java Web Project

1: Project Structure

2: BookBean.java

```
public class BookBean {  
    private String bookCode;  
    private String bookTitle;  
    private String bookAuthor;  
    private String bookPrice;  
    // getters, setters  
}
```

3: ReportServlet.java

```
protected void doGet(HttpServletRequest request, HttpServletResponse response)
throws ServletException, IOException {
    ServletContext context = request.getServletContext();
    String path = context.getRealPath("/WEB-INF/jasper/BookReport.jrxml");
    JRBeanCollectionDataSource source = null;
    JasperReport jasperReport;
    JasperPrint print;
    ArrayList<BookResponseDTO> list = null;
    if (request.getServletContext().getAttribute("list") != null) {
list = (ArrayList<BookResponseDTO>) request.getServletContext().getAttribute("list");
    }
    // Parameters for report
    Map parameters = new HashMap();
    parameters.put("ReportTitle", "Book List");

    try {
        source = new JRBeanCollectionDataSource(list);
        jasperReport = JasperCompileManager.compileReport(path);
        print = JasperFillManager.fillReport(jasperReport, parameters, source);

        if (export.equals("excel")) {
            response.setContentType("application/vnd.ms-excel");
response.setHeader("Content-Disposition", "attachment; filename=book.xls");
            // final OutputStream

            JRXlsExporter exporterXLS = new JRXlsExporter();
            exporterXLS.setParameter(JRXlsExporterParameter.JASPER_PRINT, print);
            exporterXLS.setParameter(JRXlsExporterParameter.OUTPUT_STREAM,
response.getOutputStream());
            exporterXLS.setParameter(JRXlsExporterParameter.IS_ONE_PAGE_PER_S
HEET, Boolean.TRUE);
            exporterXLS.setParameter(JRXlsExporterParameter.IS_WHITE_PAGE_BACK
GROUND, Boolean.FALSE);
            exporterXLS.setParameter(JRXlsExporterParameter.IS_REMOVE_EMPTY_S
PAGE_BETWEEN_ROWS, Boolean.TRUE);
            exporterXLS.setParameter(JRXlsExporterParameter.IS_DETECT_CELL_TYP
E, Boolean.TRUE);
            exporterXLS.exportReport();
        } else {
            response.setContentType("application/pdf");
response.setHeader("Content-Disposition", "attachment; filename=book.pdf");
            JRPdfExporter exporterPdf = new JRPdfExporter();
            exporterPdf.setParameter(JRPdfExporterParameter.JASPER_PRINT, print);
            exporterPdf.setParameter(JRPdfExporterParameter.OUTPUT_STREAM,
response.getOutputStream());
            exporterPdf.exportReport();
        }

    } catch (JRException e) {
        e.printStackTrace();
    }
}
```

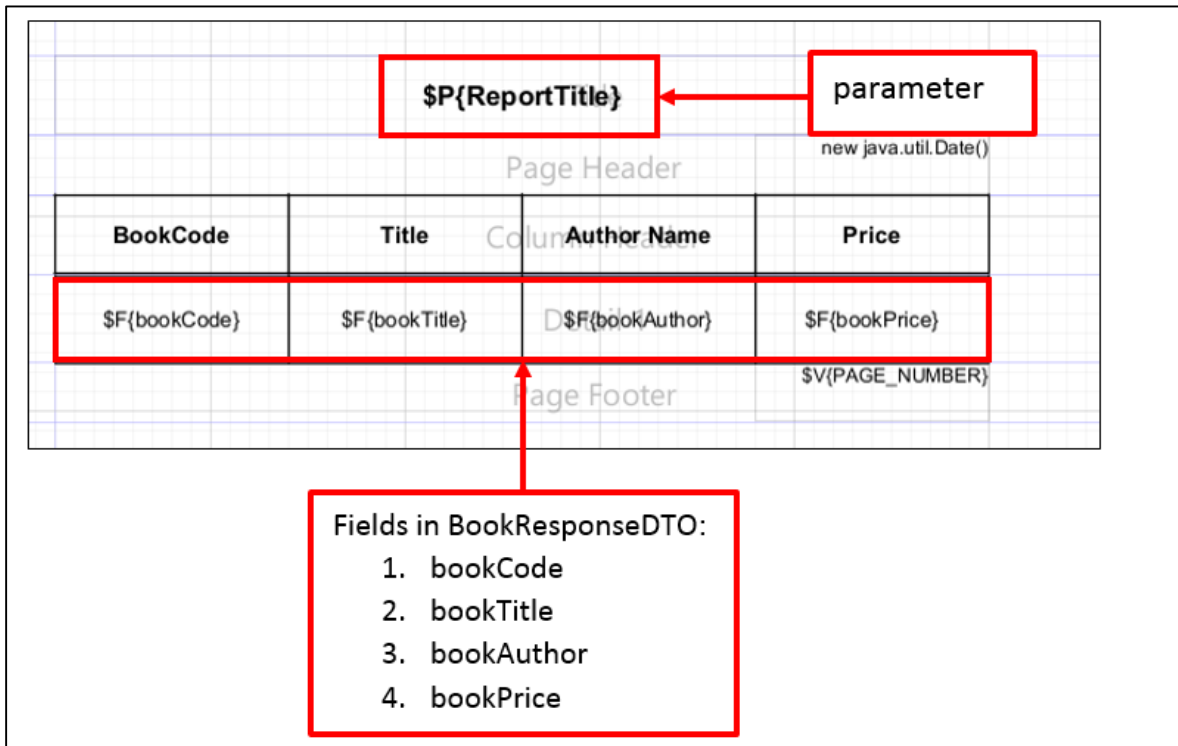

4: displaybook.jsp

```
<%@ page language="java" contentType="text/html; charset=ISO-8859-1"
    pageEncoding="ISO-8859-1"%>
<%@ taglib uri="http://java.sun.com/jsp/jstl/core" prefix="c" %>
